**FRONTLINE COMMENDS GROUND-BREAKING FCC DECISIONS,
MOVES FORWARD WITH 700 MHZ SPECTRUM PLANS**

WASHINGTON, D.C., and GREENSBORO, N.C., July 31, 2007 – Frontline Wireless today complimented the FCC for putting in place two ground-breaking ideas in today’s 700 MHz spectrum policy decisions: (1) The nation’s first public safety-private partnership; (2) Clear implementation of an open access paradigm for wireless broadband.

In light of today’s FCC decision to promote a nationwide interoperable broadband network for first responders, and to provide a more open wireless platform for consumers, Frontline Wireless looks forward to moving ahead with the next steps of its business strategy to participate in the upcoming 700 MHz spectrum auction.

“In the wake of the FCC’s decision, we can roll up our sleeves and get to work building the business of our dreams,” said Frontline Wireless CEO Haynes Griffin.

“The policy debate has come a long way in a short period toward open networks and a public private partnership, and we commend the FCC for advancing these important public interests,” said Frontline Chairman Janice Obuchowski. “But in areas where the Commission did not go far enough, such as including wholesale in open access requirements and in the scope of the designated entity definition, we will be reviewing the FCC’s decision closely and considering petitioning for reconsideration.”

“Frontline’s vision remains unwavering for a nationwide 4G network for interoperability – bringing together the promise of high tech with the needs of public safety,” said Frontline partner Jim Barksdale. “We entered this debate to ensure that FCC policy would enable a viable commercial enterprise to meet public safety’s needs through a partnership. But without commitments to ensuring competition – such as wholesale obligations – we are disappointed. The risk is that this spectrum will simply be warehoused by the largest carriers rather than turned loose to meet public safety’s needs.”

About Frontline Wireless

Frontline Wireless, LLC (www.frontlinewireless.com) is based in Greensboro, N.C., with offices in Washington, D.C. Frontline is organized for the purpose of building a nationwide public safety broadband network and is committed to providing innovative solutions for public safety and commercial users alike.
